

TURKISH EQUITIES / TRANSFER OF COVERAGE

10 January 2024

Turkish Automotive Sector

Closed the year with records

We are re-initiating our coverage for Turkish automotive companies, FROTO, TOASO, and DOAS with new sector data forecasts, company specific estimates and updated macroeconomic calculations. On our revised valuation models, FROTO stands out as our top-pick amongst auto players followed by TOASO and DOAS. Turkish automotive companies have had a stellar year, with 63% YoY domestic market volume growth in 2023. The growth was mainly supported by the low interest rate environment and the gradual stabilisation in USD/TRY rates. Export volumes to the EU/UK were also strong, benefiting from pent-up demand from 2021-22 with record order books. Momentum remained brisk in the last quarter on the seasonality effect; however, we believe the risks now are on the downside for demand in 2024. Our stance rests on the fact that delayed orders are masking the demand challenges caused by a tightening monetary policy at home and deteriorating macroeconomic outlook in export markets. We believe most of these orders are decayed, raising question marks over the sustainability of the 2023's growth trajectory. Commercial vehicle (CV) sales may increase asymmetrically compared to passenger car (PC) sales, along with the electric vehicle (EV) transition and continuance of investment expenditures. Hence, we foresee a total light vehicle (LV) shrinkage of 27% in the domestic market with a PC shrinkage of 29%, and light commercial vehicle (LCV) shrinkage of 20%. On the production front, the EV trend has also had a significant impact on the product lines of domestic original equipment manufacturers (OEMs), forcing them to modify existing product lines or build new lines. This has led to aggressive new model launches and electrification of existing models, which we have incorporated in our valuations and sector projections.

In view of these changes, we are re-initiating our coverage for three stocks that trade on the Borsa İstanbul; FROTO, TOASO, and DOAS. We initiate coverage of these stocks:

Ford Otosan - Keeping Pace... Re-initiating with an Outperform rating and 12-month DCF-driven TP of TRY1,225/share, offering 63% upside potential from current market levels. The stock trades at a P/E of 6.3x and EV/EBITDA of 6.2x based on our 2024YE prospective earnings, implying an average of 91% and 63% discount to its 5-year average historical multiples, respectively.

Tofas – On the Cusp of a Transition... Re-initiating with an Outperform rating and 12-month DCF-driven TP of TRY317/share, offering 46% upside potential from current market levels. The stock trades at a P/E of 5.9x and EV/EBITDA of 5.2x based on our 2024YE prospective earnings, implying an average of 59% and 28% discount to its 5-year average historical multiples, respectively.

Dogus Otomotiv – Hazy Domestic Outlook Weighs on Profitability... Reinitiating with a Neutral rating and 12-month DCF-driven TP of TRY323/share, offering 28% upside potential from current market levels. The stock trades at a P/E of 3.2x and EV/EBITDA of 3.7x based on our 2024YE prospective earnings, implying an average of 61% and 25% discount to its 3-year average historical multiples, respectively.

Manufacturing Remains Solid

The EV trend has had a significant impact on original equipment manufacturers' (OEMs) product lines, forcing them to modify the existing or build new manufacturing lines. This has led to aggressive new model launches and electrification of existing models. We believe this trend will continue going into 2024-25. Electric CV projects are also in the agenda for most OEMs, contributing to overall new model launches and electrifications. The rate of replacement is poised to increase in the coming years with these new or existing electrified models, along with the low base effect for volumes from the Covid-19 pandemic and the semiconductor shortage.

According to figures provided by the Automotive Manufacturers Associations (OSD), 11M23 export volumes were up 6% YoY, mostly attributable to the advantage of Turkish OEMs in terms of production and freight costs. We expect the proportion of production being exported to hover at around 60-70%, with most exports being shipped to the EU and MENA regions, allowing the companies to mitigate any downside risks related to the Turkish Lira and raw material prices.

Figure 3 - Exports/Production (%)

Source: OSD Source: OSD

Normalization in the Domestic Market

Turkish automotive companies have enjoyed a stellar year so far, reaching record volumes in both PC and CV sales. Looking at 2023 figures, PC sales were strong, accounted for 78% of all LV sales. Comparing the data to previous year, PC sales were up 63% YoY to 966k units while LCV sales only rose by 39% YoY to reach 265k units. The growth in 2023 mainly supported by the pent-up demand from the semi-conductor shortage which affected vehicle availability in 2021-2022. Heavy Commercial Vehicle (HCV) sales also performed strongly, supported by the need of infrastructure facilities, particularly in cities affected by the devastating earthquake. Sales reached 35,000 units in 11M23, up 29% YoY, according to data published by the heavy commercial vehicles association (TAID).

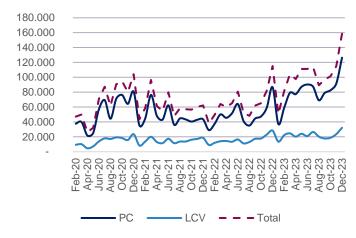

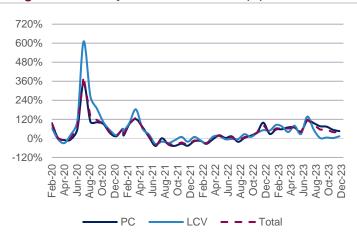

Figure 5 - Monthly Vehicle Sales Growth (%)

Source: Automotive Distributors' Association (ODD)

Source: ODD

The negative real interest rate environment with the gradual stabilisation of exchange rates at the beginning of 2023 was another driver of the surge in demand, with consumers strengthening their purchasing power. Furthermore, motor vehicles have been used as an alternative investment tool in this high inflation, low interest rate environment. As a result, vehicle sales were strong, despite a deteriorating macroeconomic environment, a depreciating currency, a lack of discounts, and low interest rate promotions by the companies.

Figure 6 - Vehicle Price Performance

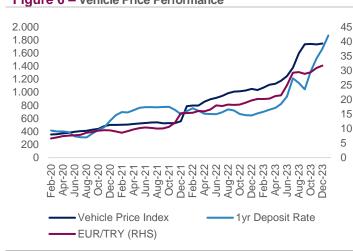

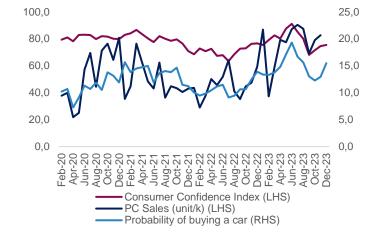

Figure 7 - Macro Indicators / Total Domestic PC Sales

Source: CBRT and Turkish Statistical Institute (TUIK)

Source: ODD, TUIK

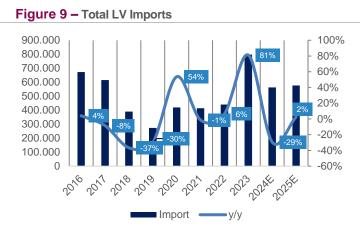

Total LV sales volume rose by 57% in 2023, reaching record highs to 1.23mn units. Going into 2024, we expect YoY declines. Our view rests on the fact that the positive real interest rate environment and dip in second hand car prices are indications of a normalization in the market. Therefore, we believe demand will be subdued in 2024, forecasting a total PC volume shrinkage of 29% and LCV shrinkage of 20% in 2024 representing a total LV shrinkage of 27%. Our asymmetrical growth expectation is based on continuing investments and the increasing need for CVs in the wake of the devastating earthquakes which struck the south of Türkiye. We expect a sharper contraction in volumes of imported cars than in domestically produced cars. For the PC market, we expect a shrinkage of 24% in domestically produced cars and a 31% contraction in volumes of imported cars.

Total

Source: ODD - QNBFI Calculations

In terms of market shares, Tofas' presence in PC market still remains strong with the Fiat brand commanding a 14% share in total domestic PC sales. On the LCV front, Ford maintains its dominant position with strong Courier, Custom and Transit sales. Going forward, we do not expect any major shift in market shares, but expect Ford to increase its share in the PC market with the Puma model. The migration to EVs has been observed with two leading brands -TOGG and Tesla. The launch of the TOGG and Tesla's model Y has driven the share of EVs in total PC sales. According to December figures, EVs were accounting for 10% of total PC sales, compared to just 2% at the beginning of 2023. We expect the migration to EVs to continue, but at a slower pace, as we consider the growth starting in May as a hype by the launch of the TOGG and Tesla's expansion into Turkey.

Source: ODD - QNBFI Calculations

European Market to Remain Brisk, Especially on LCV Segment

EU's car market also enjoyed a bountiful year, with sales expanding significantly to 9.29mn units in 9M23, representing 17.3% YoY growth. PC registrations grew by 6.8% in November, marking the sixteenth consecutive monthly increases and in 9M23, PC registrations reached 7.9mn units, increased by 17.0% YoY. For the CVs, 9M23 CV (ex-bus) sales reached 1.35mn units, up by 19.3% YoY. LCV (vans >3.5t) sales reached1.08mn units increased by 14.6% YoY.

As in Türkiye, pent-up demand due to the semi-conductor shortage in 2021-22 was realised in 2023. Despite the pent-up demand, sales volumes have not yet returned to pre-pandemic levels. This suggests to us that the pent-up demand may continue into 1H24. The trend towards decarbonization also poses upside as it leads to renewals in vehicle fleets of large companies. Combined with a possible improvement in the macro outlook, we may see a return to prepandemic level.

In our projections, however, we have remained conservative on our volume expectations for both the PC segment on the back of a possible decay in pent-up demand and the contrarian argument of a continuing deteriorating macro environment postponing renewals to 2025. We are somewhat more sanguine about the CV segment as replacements for CVs are more mandatory. We believe the renewals will continue on the CVs, either electrification or disposal of old vehicles despite any macro headwinds.

The shift to battery electric vehicle (BEV) continued in the PC segment, accounting for a 14% market share in the Jan-Nov 2023 period, compared to 11% in the same period of the previous year. Petrol share declined by 1% compared to same period previous year to 36%. Diesel share dropped significantly by 3 points to 14% losing its shares to mostly BEV and HEV type vehicles.

On the CV front, diesel vans remained the most popular option throughout in 9M23, commanding 83% of the market—slightly lower than its 2022 share of 87%. The popularity of alternative fuels and electric options is growing, resulting in minor changes in the market positioning. The market share of electrically charged vans increased to 7.3%, with sales volumes almost doubling with a 91.4% rise. In the meantime, 89% of the market was comprised of petrol and diesel vehicles in this segment, with sales of petrol vehicles increasing by 39.6% with sales of diesel vehicles up by 9.1%.

Transition to EV in CV sales in Europe expected continue, increasing 8% in 2024, according to BloombergNEF data. The growth slows down in 2025e, growing only 4% and reaching a total of 2.6mn units. Charger investments are increasing as well and projected to be increased in the upcoming years. The data shows us two things. First, pent-up demand from Covid-era continues with strong new CV registrations, second is the industry shifts to new challenges with heavier regulations on decarbonization. We see that as an opportunity for OEMs although they are forced to shift manufacturing lines and inventing a long-term strategy. We expect that Europe and the UK will continue to commit to EV transition in CVs, investing in the necessary fields to accelerate EV transformation for 2024 and onwards and encourage EV adoption. Accordingly, we may continue to see large fleet replacements which will keep the market resilient.

Looking at sole UK CV registrations data, which is one of the major exports markets for Turkish manufacturers, 2023-YTD LCV sales kept its high pace and increased to 311.7k units, representing an increase of 19.8%. November data showed the 11th consecutive monthly increase, up by 12.7% to 27,433 units. Demand for MCV more than doubled, up by 161%. In terms of market shares, Ford's dominance continues in the LCV segment with a YTD market share of 30% (Jan-Nov22: 38%), followed by Volkswagen 10% (Jan-Nov22: 10%), and Vauxhall 10% (Jan-Nov22: 10%). On the HCV front, again Ford has the biggest share with 32% (Jan-Nov22: 30%), followed by Mercedes with 26% (Jan-Nov22: 18%), and Fiat with 16% (Jan-Nov22: 18%).

TURKISH EQUITIES / Auto Sector Report

Ford Otosan

Keeping pace

We are re-initiating our coverage of Ford Otosan (FROTO) with an Outperform rating and 12-month DCF-driven TP of TRY1,225/share, offering 62% upside potential from the current market levels. Based on 2024YE prospective earnings, the stock trades at a P/E of 6.3x and EV/EBITDA of 6.2x indicating a 91% and 63% discount to its 5-yr historical average multiple, respectively. FROTO's recent acquisition and investments along with new vehicle launches will help offset the weakening in demand and boost 2024 revenues. Furthermore, we think LCV growth will decouple from PC growth, particularly in the domestic market as a tightening monetary policy will primarily impact consumption rather than investments. When it comes to exports, we estimate the CV market to expand by 8%, acting as the Company's primary revenue driver of 2024. The only downside we foresee for the Company in the near future would be the normalization in margins caused by the increasing share of EV models in total sales creating a higher cost base compared to ICE models and the rising weight of exports in total sales. Weighing in the pros and cons, we think that the Company's future prospects still offer great value.

Forecasting solid export revenue growth despite a deteriorating macroeconomic environment... The Company's recent investments in the Craiova and Yeniköy plant have increased its overall manufacturing capacity to 746,500 units from 721.700 units. With the announced investment plan in electrification and next generation vehicle projects, the Company plans to increase its capacity by over 900,000 units by 2025. Accordingly, we expect the Company to round off 2023 with revenues of TR337bn, up 96% YoY, forecasting revenue growth of 73% YoY in 2024 and 41% in 25. New Courier production in the Craiova plant and next-gen Custom model should help the Company gain market share and better tackle the headwinds. We expect export sales of 589,000 vehicles in 2024, indicating a 21.1% YoY increase in export volumes. We expect export revenues to capture a higher proportion of total revenues with higher production in Romania and Türkiye, with a higher F-Max (cargo truck) market share in Europe. According to our projections, the share of exports in total revenues will reach 81% in 2024 and 83% in 2025, compared to the 74% in our YE23 calculations.

Margins to normalize but still hover above historical averages... Considering the growth trajectory seen in 2023, margins are unlikely to prove sustainable at the current levels; we rather view the levels seen in 2022 (and 2023E) as one-offs, led by supply chain disruptions in the aftermath of the Covid-19 pandemic and dramatic exchange rate movements. The Company's shift towards electrification, with its higher production costs, the ramping up of production in Romania, 1-ton CV production in Türkiye and, to a lower extent, an increasing share of exports in total revenues may also dilute margins in our view. Although exports carry slimmer but more stable profitability thanks to cost-plus export agreements, the Company achieves generating sustainable EBITDA. Accordingly, we expect EBITDA per vehicle to decrease by 16.6% to EUR2,032 and the PBT by 15.5% to EUR1,807 in 2024. Our calculations point to nominal EBITDA growth of 45% YoY in TRY terms, thanks to a higher top-line, but with the margin retreating to 9.8%.

Increased financial losses could limit bottom-line growth... Increasing debt levels (we expect net debt to increase to TRY 85bn in 2024) in a high interest rate environment are likely to weigh on net income. With the combination of reduced operational profitability and higher financial losses, we forecast a mere 20% YoY increase at the bottom-line for 2024 in Lira terms. Our forecasted net debt in 2024 implies a net debt/EBITDA multiple of 1.5x (2023e: 1.2x, 2022: 1.4x) and debt-to-equity of 3.8x (2023e: 3.6x, 2022: 3.5x).

We are forecasting TRY111bn in revenues for 4Q23 (up 82.2% YoY), which would lead to 2023 revenues of TRY337bn (up 96% YoY). We expect FROTO's revenues to grow by 73% in 2024 and 41% in 2025, reflecting our trust in FROTO's vehicle portfolio in the EU's LCV market and the Company's close proximity to key markets. We assume 33.1% growth in the Company's CV export volumes in 2024 on the back of additional Custom production. As a result, the share of exports in total revenues is on course to reach 81.6% in 2024, while we assume a share of around 82% for the long term. The represented volumes point to a CUR of 84% for 2024 and 87% for 2025.

The risk of a contraction in the domestic market and uncertainty surrounding export markets due to a weaker macro environment is likely to be offset by the investment recovery fee guarantee in export agreements, along with a weakening of the TRY, in our view. Therefore, the forecast of 13.5% volume growth in 2024 is well within reach and open to further upside with the capture of further market share with the electrified Courier (expected launch date 4Q24), the Custom (expected launch date 1H24) and current Transit models. In the long-term, our biggest bet is on the truck segment, where we expect Ford Otosan to increase its presence in Europe with the F-Max.

Source: The Company Data - QNBFI Calculations

We expect CV sales in EU to increase about 8%, and foresee the growth to slow down in 2025 with a mere 3% growth, with sales reaching a total of 2.6mn units. We believe growing high-power charging network investments are also gaining momentum and are projected to be stepped up in the coming years. We believe FROTO will stand out as the main beneficiary of Europe's EV transition in CVs with the new electrified Courier and Custom models in addition to all-electric E-Transit model. Accordingly, we expect export Transit sales to increase by 8%, Custom sales by 8% and sales of the Courier by 8% in 2024 with the contribution of electrified versions of all models.

Source: The Company Data - QNBFI Calculations

We are forecasting a CAGR of 28.4% in EBITDA between 2023-2028: We expect FROTO to close 2023 with EBITDA of TRY 39.1bn (up 98% YoY), corresponding to an EBITDA margin of 11.6%. We expect margins to normalise somewhat in the following quarters, to converge with historical averages due to the Company's shift in electrification (higher production costs), adding PC to production portfolio, and to a lower extent, the increasing share of exports in total revenues. Our forecast of a 5-year CAGR of 28.4% is highly achievable and sustainable in our view, as the cost-plus pricing scheme will serve to reduce volatility in operational profitability and allow the Company to generate sustainable EBITDA. Note that domestic sales are the most profitable for the Company thanks to FROTO's competitive advantages as an OEM. We also expect electrification of existing models to dilute margins as the cost of producing is higher than for ICE vehicles.

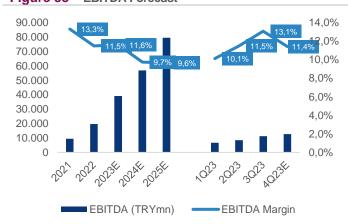

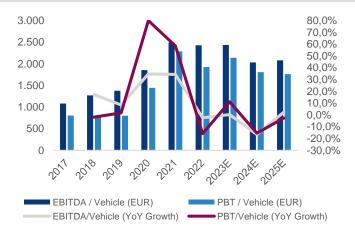

Figure 34 – EBITDA / PBT per Vehicle

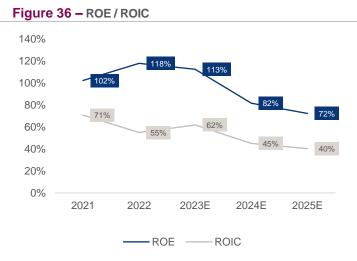

Source: QNBFI Estimates Source: QNBFI Estimates

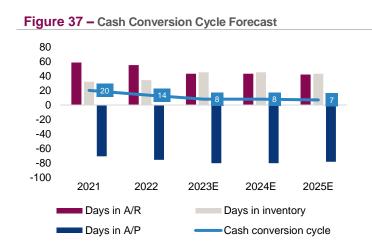

Forecasting a CAGR of 23.5% for net earnings between 2023-2028: We expect TL35.2mn in net earnings (up 89% YoY) for the 2023 full year, corresponding to a net margin of 10.5%. We forecast some erosion in the net margin due to rising financial expenses in parallel with rising interest rates. We incorporated tax incentives into our bottom-line expectations but remain somewhat conservative given the uncertainty over when the income will be realized. The ROE and ROIC are on course to erode too but remain attractive, in our view.

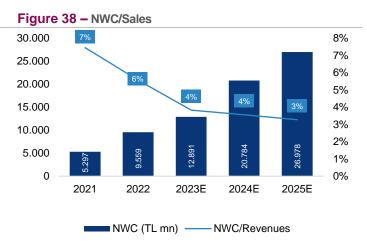

Source: QNBFI Estimates Source: QNBFI Estimates

Forecasting a CAGR of 48.3% for the FCFF between 2023-2028: We expect a FCFF of TL12.1bn (up 197% YoY) in 2023, corresponding to an FCFF margin of 3.6%. We do not envisage any deterioration in net working capital as the deal between Ford Europe requires a payment within 14 days in Türkiye, while in Romania the Company collects its receivables within 30 days. We assume a contraction in the 2024 FCFF margin to 0.6% given our expectation of lower demand and higher capital expenditures. We have fully incorporated the Company's investment plans in our CAPEX assumptions and added maintenance CAPEX to arrive at a figure of EUR950mn in CAPEX for both 2024 and 2025. We expect dividend payments to continue despite the ongoing investments and foresee TRY21.1bn dividends in 2024E.

Valuation

We valued Ford Otosan using DCF valuation and set our 12-month price target at TRY 1,225/share. Our 12-M TP represents an 62% upside potential from the current market levels. In our valuation model, we have incorporated an average weighted-average cost of capital (WACC) of ≈25%, driven from 45% cost of borrowing, 44.9% cost of equity (40% risk-free rate, 6.0% equity risk premium, 0.82 stock beta) which decays until 2026. Lastly, we set a terminal growth rate of 10%.

Our key model assumptions are as followed;

- We are forecasting solid revenue growth for 2024-25 with a strong contribution from the production of the new Courier at the Craiova plant and the next-gen Custom model at the Yeniköy plant, a stronger FX trajectory and increasing sales volumes albeit to our expectation of growing EU's LCV market. Furthermore, launches of the all-electric Puma and the new Courier, including PHEV & BEV versions of Next-Gen Custom model will the boost top-line, in our view. We forecast 73% YoY revenue growth in 2024 and a 33.4% CAGR in revenues over the 2023-28 period.
- While we assume margins will be slashed, we still expect them to remain above their historical averages. We believe the 2022-23 levels for margins ≈12% are not sustainable. In general, we calculate that the electrification of existing plans, higher share of exports in total sales and adding PC to production portfolio will have a diluting impact on margins. However, we believe that EBITDA will, at least on a nominal basis, continue to grow in 2024 thanks to the growth at the top-line. We forecast 45% YoY EBITDA growth for 2024 and a 28.4% CAGR in EBITDA over the 2023-2028 period.
- The heavy investment cycle for the aforementioned new vehicle launches, electrification of existing models and the BEV truck project continues. Accordingly, our CAPEX assumption is relatively high compared to previous years. However, we performed our calculations in line with the Company's investment plans.
- ➤ Based on 2024YE prospective earnings, the stock trades at a P/E of 6.3x and EV/EBITDA of 6.2x indicating a 91% and 63% discount to its 5-yr historical average multiple, respectively.

Tofas

On the cusp of a transition

We are re-initiating our coverage for TOASO with an Outperform rating and 12-month DCF-driven TP of TRY317/share, offering 46% upside potential from the current market levels. Looking at the multiples, the stock trades at a P/E of 5.9x and EV/EBITDA of 5.2x based on our 2024YE prospective earnings, implying an average discount of 59% and 28% to its 5-year historical multiples, respectively. We have revised our model for Tofas by incorporating the acquisition of Stellantis Otomotiv (SO), K0 production, along with new assumptions for the market and macro-economy. We based our projections on the assumption that the transaction would be completed at the end of 1h24 upon receiving the Competition Board's approval at the end of its final examination. We added the sale of 79k SO vehicles to our YE24 assumptions, taking our total domestic sales volume forecast to 204k vehicles. Looking at the financials, we are expecting 57% revenue growth for 2024 with the help of SO branded vehicle sales. We find the 2021-23 margin levels unsustainable, and thus expect a 19% YoY slump in EUR based EBITDA per vehicle in 2024 on weaker margins. As well as lower operational profitability, the bottom-line will be let down by reduced income from FX gains and interest income, as most of the cash will be used for the SO deal. When the deal is sealed, share of domestic revenues in total revenues will increase and reach 84% in our calculations for 2024. We assume a rise in the share of export with the production of the K0 to around 22% in 2025 and beyond in our projections. The CUR numbers look depressing for 2024, sliding to 37% (2023E: 57%, 2022: 61%), with the termination of the Doblo model. Thus, we believe that all the negativity has already priced in, and 2025 prospects of the Company offers great value.

Stellantis branded sales and K0 production to be the main drivers of the top-line growth... Despite the expectation of lower domestic sales volumes caused by a tightening monetary policy, and a lower CUR with the termination of Doblo manufacture, we expect the Company to record 57% revenue growth in YE24. The volume contribution from the Stellantis will be significant in our view, as we expect 79k units of these vehicles to be sold in 2024, leading to a total domestic sales volume of 203k vehicles. The K0 model will contribute to 2025 revenues, along with full contribution of Stellantis sales and our forecasts of improving domestic volumes. We forecast 283k units of total domestic sales and 1118k units of export sales volume for 2025e which represents TRY294bn in revenues, indicating 83% YoY growth for 2025. We expect the Company to deliver 105k units of K0 model vehicles annually in 2025 and beyond, with sales of the SO to reach 158k vehicles, taking Tofas' total sales volumes to 402k units, and a healthier CUR of 57%.

EBITDA margin set to converge with historical averages... Considering the growth trajectory in 2023, we find the current margin levels unsustainable in the near future as the pricing advantages presented by high demand and restricted availability diminish. Sales of Stellantis branded vehicles could compromise margins before the synergies of the acquisition are seen, bringing down EBITDA per vehicle to EUR2,113 in 2024, (2023E: EUR2,623), corresponding to a 2024 EBITDA margin of 12.9% (2023E: 17.4%). We forecast a sharp contraction in the PBT per vehicle from EUR2,880 in 2023E to EUR2,065 for 2024, reflecting the reduction of 2023 FX and interest income, with the cash spent on the Stellantis deal. Accordingly, we expect a PBT margin of 12.6% for 2024 (2023E: 19.1%).

TOASO's 9M23 domestic PC sales grew by 53% with LCV sales up by 39% YoY. Looking at Fiat sales, 2023 figures indicate that the Company captured around 2% in market share in the PC market but lost 1% in the LCV market which was hit by the production cut in production of the Doblo, which is expected to be fulfilled by K0 production in 2025. As Stellantis' portfolio mostly sells PC (personal cars), the share of PC volumes will increase in total domestic sales in 2024 as well. Export volumes, especially LCV volumes, continued to shrink and are expected to shrink further in parallel with Stellantis sales in our projections. Our sales projections, including specific models and markets, are set out below;

Source: The Company Data - QNBFI Calculations

For the last quarter, we are forecasting TRY32.8bn in revenues (up 39.6% YoY) in 4Q23, pointing to 2023 revenues of TRY101.5bn (up 54.9% YoY). Despite the challenges we expect in the domestic market, we expect TOASO's revenues to grow by 57.0% in 2024 and 82.0% in 2025. Growth will mainly be driven by our forecast of a weaker TRY trajectory and the inclusion of Stellantis and K0 sales. The contribution from Stellantis volumes will be limited; we expect the sale of 79k vehicles in the second half of 2024, contributing to a total domestic volume of 202k units. The K0 model sales and full contribution from Stellantis Otomotiv will contribute to 2025 revenues, which are set to grow by 82% YoY in our projections. The weight of LCVs in total sales volume will increase in 2024, as we expect the Company to deliver 105k K0 model sales in 2025.

Source: Bloomberg - QNBFI Calculations

We forecasted a shrinkage in volumes in the domestic market due to the weaker macro environment. We estimate TOASO's total domestic LV market share of 16% for 2023E. With SO, the LV share would surge to 21% in our YE24 projections, and 33% in YE25 projections. Sole Tofas' total market share is expected to have shrunk to 16% in YE23 with shrinkage in the LCV market due to the stoppage in Doblo production, and shrink further to 14% in our YE24 projections with the termination of Fiorino brand. Depending on EV penetration in Türkiye, the Company may capture more market share in 2025 with the K0 model in the LCV market, but for the time being we are adding those sales to our export projections.

We are forecasting a CAGR of 19.7% in EBITDA between 2024-2029: The 9M23 EBITDA margin of 16.9% is quite high, especially compared to the 10yr average of ≈12.5%. For the last quarter, we estimate a 18.3% EBITDA margin, which will increase the 2023 fill year margin to 17.4%. Considering the growth trajectory for 2023, we believe that 2023 margins are not sustainable in the near future as the pricing advantages arising from high demand and low availability will fade away. Stellantis sales may compromise margins before the synergies arising from the acquisition, bringing the EBITDA per vehicle down to EUR2,113 in 2024, (2023E: EUR2,623), corresponding to a 2024 EBITDA margin of 12.9%. We forecast a decline in the PBT per vehicle from an estimated EUR2,880 in our 2023 projections to EUR2,065 for 2024. The dramatic decrease in the PBT per vehicle reflects the reduction of 2023 FX and interest income, with the cash having been spent on the Stellantis deal. Accordingly, we expect a PBT margin of 12.6% for 2024 (2023E: 19.1%).

Forecasting a CAGR of 17.3% in net earnings between 2023-2028: We expect TRY17.6bn net income in 2023, estimating TRY5.5bn for 4Q23, corresponding to a 17.3% net margin for 2023. We expect lower operational profitability and lower FX and interest income in 2024. We calculate a mild 6% YoY increase in net income to TRY18.6bn in 2024, corresponding to a net margin of 11.7%. We incorporated tax incentives in our bottom-line expectations but adopted a conservative approach given the uncertainty over when the income will be realized.

Source: QNBFI Estimates

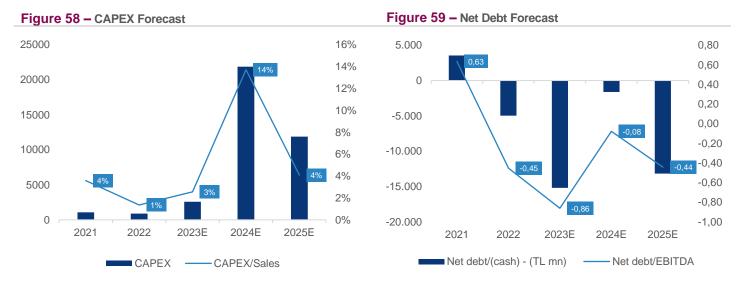

20

Forecasting TRY-2.9bn cashflows for 2024e: We expect a FCFF of TRY9.7bn (down 10% YoY) in 2023E, which corresponds to a FCFF margin of 9.5%. We expect net working capital to deteriorate with the acquisition of SO and a weaker demand environment. In the past years, NWC/Sales percentage was negative at in double-digits due to decreasing receivables and lower inventory days. In 2023, we started to see distortions. Payable days decreased with increasing inventory days. We expect the issue to worsen in 2024, as a dilutive effect of Stellantis may also be seen. In this respect, we expect NWC/Sales to increase to 5% in 2024; and TRY-2.9bn FCFF, representing a FCFF margin of -1.8%. Our CAPEX assumption includes the new investments. We carried out our calculations in line with the Company's strategic and investment plans. Accordingly, we expect EUR250mn of investment in both 2024 and 2025 to be spent on the production of new models.

Valuation

We valued Tofas using DCF valuation and found a 12-month price target of TRY 317/share. Our 12-month TP offers 46% upside potential at the current market levels. In our valuation model, we have incorporated an average weighted-average cost of capital (WACC) of ≈25%, driven from 45% cost of borrowing, 45.2% cost of equity (40% risk-free rate, 6.0% equity risk premium, 0.92 stock beta) which decays until 2026. Lastly, we set a terminal growth rate of 10%.

Our key model assumptions are as follows;

- ➤ We are forecasting moderate revenue growth over the 2024-25 period given the weaker volume forecasts and expectation of a stronger FX trajectory. The Stellantis deal and new models will support the top-line significantly, and we forecast a CAGR of 34.5% between 2023-2028.
- ➤ We have assumed that margins will be slashed while hovering above historical averages for 2024 and 2025. We find the 2022-23 margin levels unsustainable. Therefore, our forecasts conservatively point to only nominal EBITDA growth for 2024. We project 16% YoY EBITDA growth for 2024, but to be followed by a 19.7% CAGR in EBITDA between 2023-2028. Our EBITDA forecast points to an EBITDA margin of 12.9% for 2024 and 10.2% for 2025.
- > Our CAPEX assumption includes the new investments based on the Company's strategic and investment plans.
- ➤ Based on 2024 prospective earnings, the stock trades at a P/E of 5.9x and EV/EBITDA of 5.2x and, implying an average of 59% and 28% discount to its 5-year historical average multiples, respectively.

Dogus Otomotiv (DOAS)

Hazy Domestic Outlook Weighs on Profitability

We are re-initiating our coverage of DOAS with a Neutral rating and 12month DCF-driven TP of TR323 /share, offering 28% upside potential from the current market levels. The stock trades at a P/E of 3.2x and EV/EBITDA of 3.1x based on our 2024YE prospective earnings, implying a 61% and 25% discount to its 3-year historical multiples, respectively. After a great year of high margins and solid sales volumes, we believe a process of normalization is approaching in parallel with the tighter monetary policy. Our view rests on the fact that softer demand in parallel with increasing vehicle availability will force the Company to sacrifice its upper hand in pricing and eventually initiate discounts and sales campaigns to maintain its market share We still expect DOAS to post strong 4Q results though, leading to an excellent set of 2023 results, yet, as the Company's sales heavily depends on the domestic demand, we believe DOAS is the most prone to downside risks amongst other players. Accordingly, we expect to start seeing a reversion in sales volumes and profitability margins. We do not foresee a growth in TRY terms in EBITDA or net income for 2024, and calculate 14% and 13% shrinkage, respectively.

Domestic LV volumes at risk from tighter monetary policy... The recent rate hikes implemented by the Central Bank of the Republic of Türkiye (CBRT) are likely to limit volume growth in the domestic market in 2024, postponing demand forward given the high opportunity cost of capital. Although higher interest rates on vehicle loans would normally further dampen demand, given that around 80% of car sales are cash transactions, this would only have a limited negative impact on our DOAS estimates. We foresee volume growth for the last quarter of 2023, but forecast a shrinkage of 28.7% in PC sales and 19.7% in LCV sales for 2024. This decline may extend until 1H25, and we therefore only forecast a mere 2% volume growth for 2025. The major upside rsik for our assumptions would be earlier than expected rate cuts, which may start from 2H24.

EBITDA margin set to converge with historical averages... Considering the growth trajectory in 2023, we find 2022-23e margin levels unsustainable for the future given that the pricing advantages arising from high demand and restricted availability will fade away. Until then, however, we can expect a strong last quarter, and estimate a 2023 full year EBITDA of TRY23.6bn, up 200% YoY and corresponding to a 18.2% EBITDA margin. For 2024, the risks are on the downside based on the aforementioned points, and accordingly we expect a decrease in EBITDA despite the expected changes in exchange rates. We forecast a 14% decline in EBITDA to TRY20.2bn in 2024, with a much more subdued 11.7% EBITDA margin. We expect EBITDA margins to converge with historical levels, although remaining above the historical levels of ≈6% throughout our forecast period.

Net income likely to be supported by strong VDF Servis, Yuce Auto and TUVTURK financials... Due to increasing inflation and a lower TRY, we have sharply raised our forecast of VDF Servis' income. TUVTURK, on the other hand, is likely to achieve the highest growth, given our expectation that vehicle inspections will remain high in 2024. Skoda sales, under Yuce Auto, are also likely to contribute significantly, with Skoda consistently capturing market share and increasing sales volumes. In this respect, we expect the total income from subsidiaries to represent 29% of the total 2024YE earnings.

Dogus' 2023 PC sales grew 62% and LCV sales 66% YoY. Scania sales were strong as well, which led to a HCV segment growth of 53% YoY. Along with strong number of deliveries, having an upper hand in pricing and higher FX rates led the Company to post a YoY 9M23 revenue growth of 169%. For the last quarter, we are forecasting TRY46.7mn (+191% YoY) revenues in 4Q23, which represents a 2023E revenues of TRY129.4bn (+1169% YoY). Due to the challenges in the domestic market, we expect DOAS' revenues to grow a mild 34% and 26% in 2024 and 2025, respectively, mostly will be accounted by weaker TRY trajectory. We expect the subsidiaries to post strong revenues though, which will be accounted with equity pick-up method.

Figure 66 - DOAS - Revenue Projections

Figure 67 - DOAS - Volumes Projections

Source: ACEA - Bloomberg - QNBFI Calculations

Source: Bloomberg - QNBFI Calculations

As mentioned, we forecasted volumes in the domestic market to shrink due to the weaker macro environment. We expect Dogus Oto's PC sales volume to shrink by 29.1% in 2024 vs. a 28.7% shrinkage in the overall market. We believe VW and Audi sales will slightly underperform the overall market but Skoda sales will be able compensate some of that.

Source: The Company Data - QNBFI Calculations

We are forecasting a CAGR of 6.5% in EBITDA between 2023-2028: The Company's margins surged from the beginning of 2022. The jump in profitability was driven by the company's upper hand in pricing due to restricted vehicle availability in the market and, to a lesser extent, the weaker TRY. The 9M23 EBITDA margin of 20.6% can be considered extremely high, especially when compared to the historical average of ≈6%. For the last quarter, we expect an EBITDA margin of 14.0%, which will bring down the 2023YE margin to 18.2% due to seasonality effect of employee bonuses. For 2024 and beyond, we believe the tables will be turned and expect profitability to merge with historical averages due to the reversing course of events within the sector and the economy. Based on our calculations, we are forecasting the EBITDA per vehicle to shrink 24% by in EUR terms in 2024 and a mild 4% in 2025, with PBT per vehicle shrinking by 18% in 2024, before recovering by 4% in 2025.

Source: QNBFI Estimates

27

Forecasting a CAGR of 11.2% for net earnings between 2023-2028: We expect TL20.1mn of net earnings (up 157% YoY) in 2023, corresponding to a net margin of 15.6%. We expect strong contributions from the subsidiaries thanks to increasing inflation and a weaker TRY. We expect VDF Servis to post the most growth with a significant vehicle inspection cycle to take place in the 2024. Skoda sales under Yuce Auto are also set to contribute significantly with Skoda consistently capturing market share and increasing its sales volume. We are forecasting some erosion in the net margin due to rising financial expenses on the back of rising interest rates.

We are forecasting a CAGR of 17.2% in the FCFF between 2024-2028: We expect an FCFF of TL3.0bn (up 2% YoY) in 2023, corresponding to an FCFF margin of 2.5%. We expect the company's net working capital to deteriorate in a weaker demand environment. The NWC/Sales ratio has decreased to single digit levels in recent years thanks to decreasing receivables and lower inventory days. In 2023, we started to see some distortions with a sharp surge in inventory days with lowering payables days. We expect the issue to worsen in 2024, but still do not expect the NWC/Sales ratio to reach double digit levels in our projections. Yet, we expect TRY4.9bn FCFF, up by 65%

Valuation

We valued DOAS using DCF valuation and set a 12-month price target of TRY323/share. Our 12-month TP represents an 28% upside potential from the current market levels. In our valuation model, we have incorporated an average weighted-average cost of capital (WACC) of ≈28%, driven from 45% cost of borrowing, 46.7% cost of equity (40% risk-free rate, 6.0% equity risk premium, 0.90 stock beta) which decays until 2026. Lastly, we set a terminal growth rate of 5%.

Our key model assumptions are as followed;

- We are forecasting moderate revenue growth for the years 2024-25, with weaker volume forecasts, and TRY trajectory. New model launches, facelifts of passenger car brands and electrification of current PC models supports top-line, but not so compelling, in our view. We forecast an 34% YoY revenue growth in 2024 and 22.9% CAGR over 2023-28E.
- ➤ We slashed margins yet, floated above the historical averages. We believe that 2022-23 margins are not sustainable. In general, we believe that DOAS' advantages in pricing will fade away. Therefore, we believe that EBITDA will shrink in 2024, due to lower appetite for cars, increasing competition and accordingly, pricing. We forecast an -14% YoY EBITDA shrinkage and a 6.5% CAGR over 2023-28E.
- Our CAPEX assumption is relatively in-line with previous years based on the Company's investment plans.
- ➤ Based on 2024YE prospective earnings, the stock trades at a P/E of 3.2x, and EV/EBITDA of 3.7x, respectively, implying an average of 61% and 25% discount to its 3-year average multiples, respectively.

QNB Finansinvest Rating System

We employ a relative scale in our rating system (i.e. Market **Outperform, Neutral, Underperform**) in order to better present relative value propositions and more actively pursue long vs. short ideas at the BIST. The relevant benchmark is the broader Turkish stock market, using the BIST-100 index as a basis. The ratings also incorporate a certain degree of relativity within the analyst's own stock coverage universe due to asymmetric return expectations among the industries under our BIST coverage. The rating system combines analysts' views on a stock relative to the sectors under coverage, and the sector call relative to the market, together providing a view on the stock relative to the market.

Individual ratings reflect the expected performance of the stock relative to the broader market over the next 6 to 12 months. The assessment of expected performance includes a function of near-term company fundamentals, industry outlook, confidence in earnings estimates and valuation, and other factors.

An essential element of our rating methodology involves benchmarking a 12-month expected return against the cost of equity. We set a required rate of return for each stock, calculated from our risk-free rate and equity risk premium assumptions. The price target for a stock represents the value that the stock is expected to reach or sustain over the performance horizon of 12 months, according to the view of the analyst.

We have separated the stocks under our coverage into two groups, mainly with respect to their liquidity (market cap, free float market cap and historical average daily trading volume) as small-cap stocks exhibit different risk/return characteristics to more-liquid large-caps. For the purposes of the relative stock rating, however, stocks within each group will be considered on an unweighted basis with regard to their market capitalization.

For a stock to be assigned an **Outperform** rating, the implied return *must* exceed the required rate of return by at least 5 percentage points over the next 12 months for our larger-cap stock coverage, or by 10 percentage points for the small-cap group. For a stock to be assigned an **Underperform** rating, the stock must be expected to underperform its required return by at least 5 percentage points over the next 12 months. Stocks between these bands will be classified as **Neutral**.

When the potential upside of an *average* stock in our coverage exceeds its required rate of return (i.e. the market upside exceeding the implied average cost of capital), a greater number of stocks would fall into the aforementioned Outperform (Buy) category, illustrating the significance of the "relative return" concept (vis-à-vis absolute return) in picking better investment ideas with a positive alpha. The same holds true when the potential upside of an *average* stock in our coverage falls short of its required rate of return.

In this regard, as a supplemental methodology, we rank the stocks in our coverage according to their notional target price with respect to their current market price, and then categorise the top group (approximately 40-50% of the companies under coverage) as Outperform, the next 40-50% as Neutral and the lowest 10-20% (and no less than 10%) as Underperform.

It should be noted that the expected returns on some stocks may at times fall outside the relevant ranges of the applicable respective rating category because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges are permitted but becomes subject to review.

Also note that the analyst's short-term view may occasionally diverge from the stock's longer-term fundamental rating.

Outperform. We expect the stock to outperform the BIST-100 over the next 6 to 12 months.

Neutral (Market Perform). We expect the stock to broadly perform in line with the BIST-100 index over the next 6 to 12 months. (Although we would normally have a neutral assessment of stocks in this category, if a stock has gone through a period of market underperformance, it would be an indication that the stock may be expected to improve its performance relative to market averages in the coming period, and vice versa).

Underperform. We expect the stock to underperform the BIST-100 over the next 6 to 12 months.
